Best Practices for Teams/Virtual Training

- Mute your microphone unless you are speaking
- Join a breakout and someone can help you
- Watch the chat window for important information, and send a chat to all with an inquiry if relevant to all – you need to exit your lab breakout room
- Don't be shy ... Ask lots of questions!

Topics

- FPGAs at Intel
- Fundamentals of Digital Electronics
- Intel® Quartus® Prime Design Software
- FPGA Design Flow
- Today's Lab

Intel® FPGA Academic Ecosystem

- Train the next generation of FPGA Designers
- Increase Intel® FPGA presence in academia

- Academic access to the latest generation of Intel FPGAs

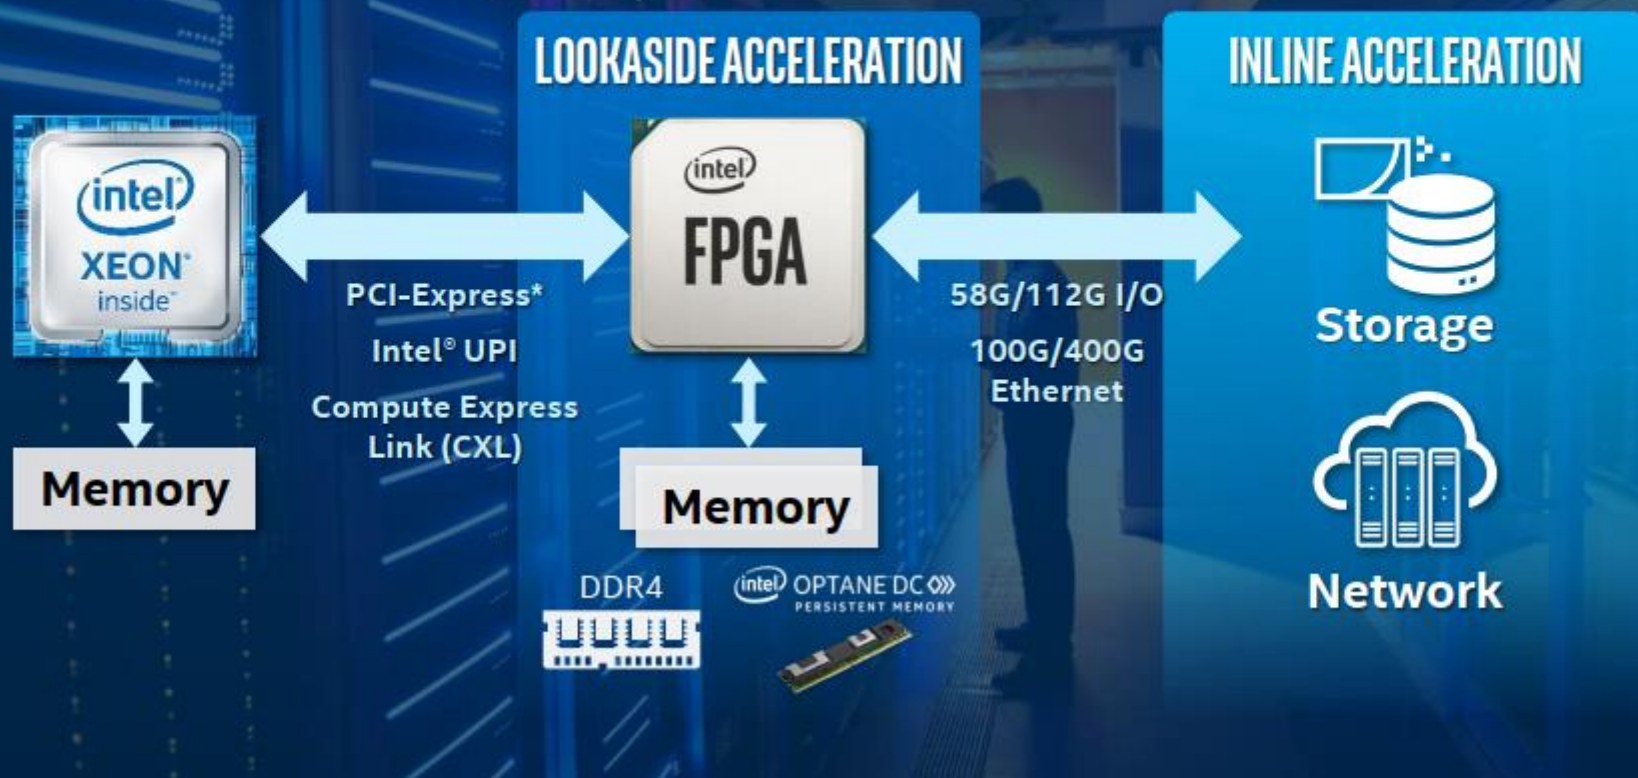

- Nurture the talent pipeline for Intel and our customers
- Engage research on Intel FPGAs

INTEL® FPGA EE COURSEWORK OFFERINGS

- Undergraduate
 - Digital Logic
 - Digital Systems
 - Computer Organization
 - Embedded Systems

INTEL® FPGAS ACCELERATING THE CLOUD & ENTERPRISE

Website Access for the Intel® FPGA Devcloud

<https://software.intel.com/en-us/devcloud/FPGA>

The screenshot shows the Intel FPGA Devcloud website. At the top, there is a blue header with a hamburger menu icon and the text "Development Tools" on the left, and the Intel logo on the right. Below the header is a large blue banner with the title "FPGA Design Development and Workloads for Hardware Acceleration". Under the title, there is a paragraph: "Develop programmable solutions and validate your workloads on leading FPGA hardware with tools optimized for Intel® technology. Use this cloud solution in the classroom to support acceleration engineering curriculum." Below this paragraph is a white button with the text "Sign Up →". Below the banner is a white section with the text "Overview | Intel® DevCloud for oneAPI | Edge" centered. Below this is the heading "What You Can Do" centered. At the bottom, there are three icons with corresponding text: 1. An icon of a circuit board with a gear and a hand, with the text "Develop custom hardware IP and FPGA designs". 2. An icon of a document with a gear, with the text "Teach advanced FPGA-based university courses". 3. An icon of a bar chart with a checkmark, with the text "Benchmark hardware acceleration performance".

Overview | Intel® DevCloud for oneAPI | Edge

What You Can Do

-  Develop custom hardware IP and FPGA designs
-  Teach advanced FPGA-based university courses
-  Benchmark hardware acceleration performance

Field Programmable Gate Array (FPGA)

- Flexible, multi-functional reprogrammable silicon
- Custom hardware functionality
- Bare-metal speed and reliability
- Truly parallel in nature

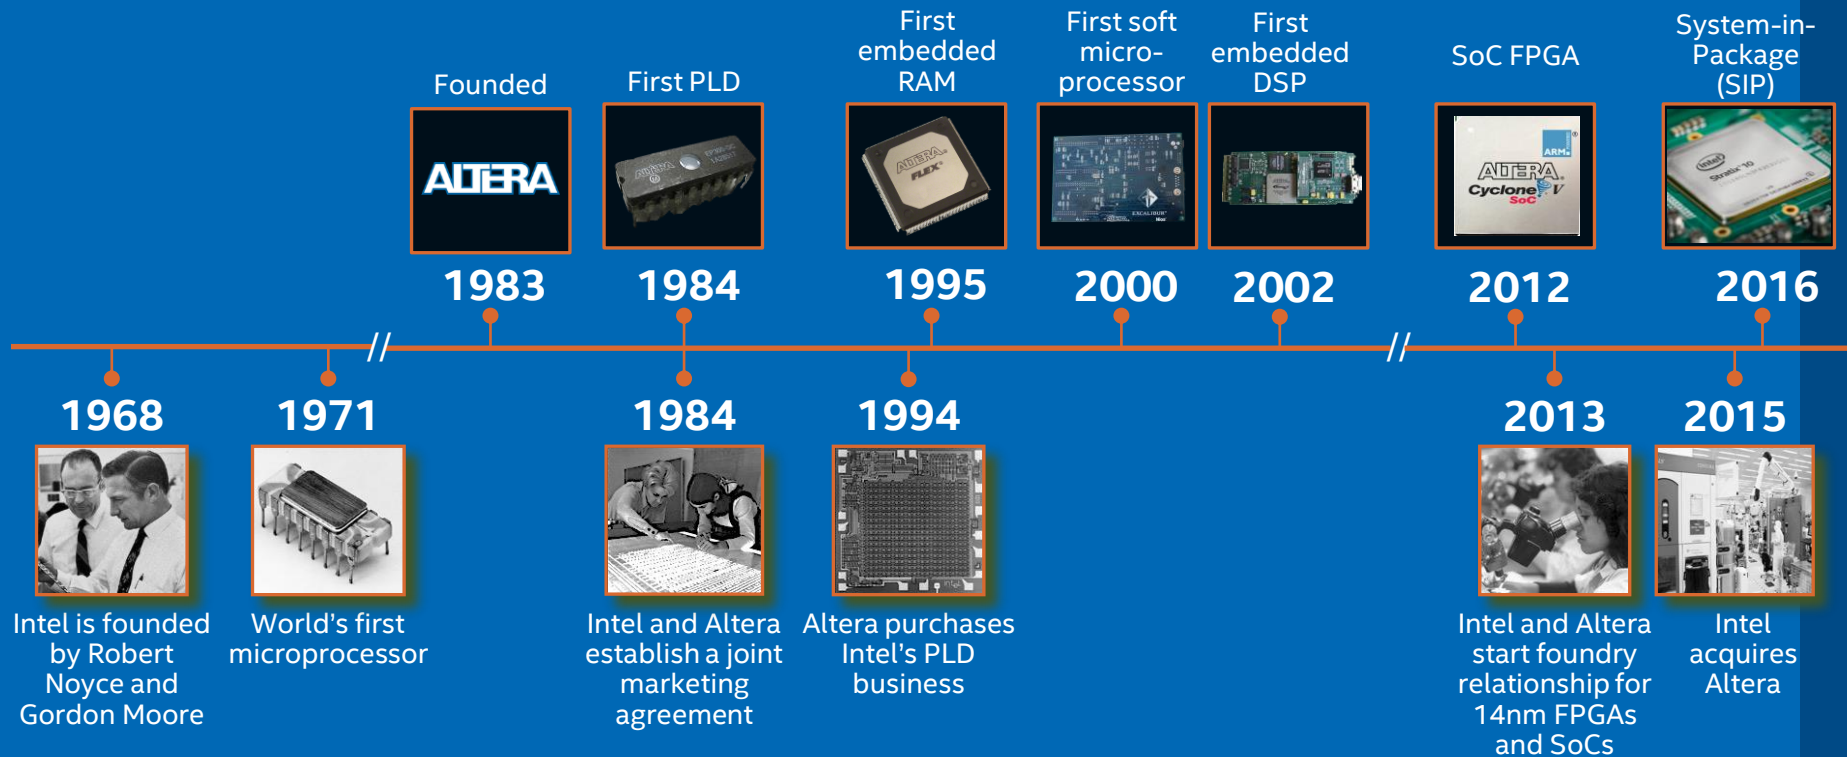

Benefits of FPGA Technology

- Flexibility
- Time to market
- Performance
- Reliability
- Long-Term Maintenance – reprogram if features change or bugs found
- Many different applications – 5G, Data Center, Industrial, DSP
- Excellent prototyping vehicle

Rise of new markets

Intel's history with FPGAs

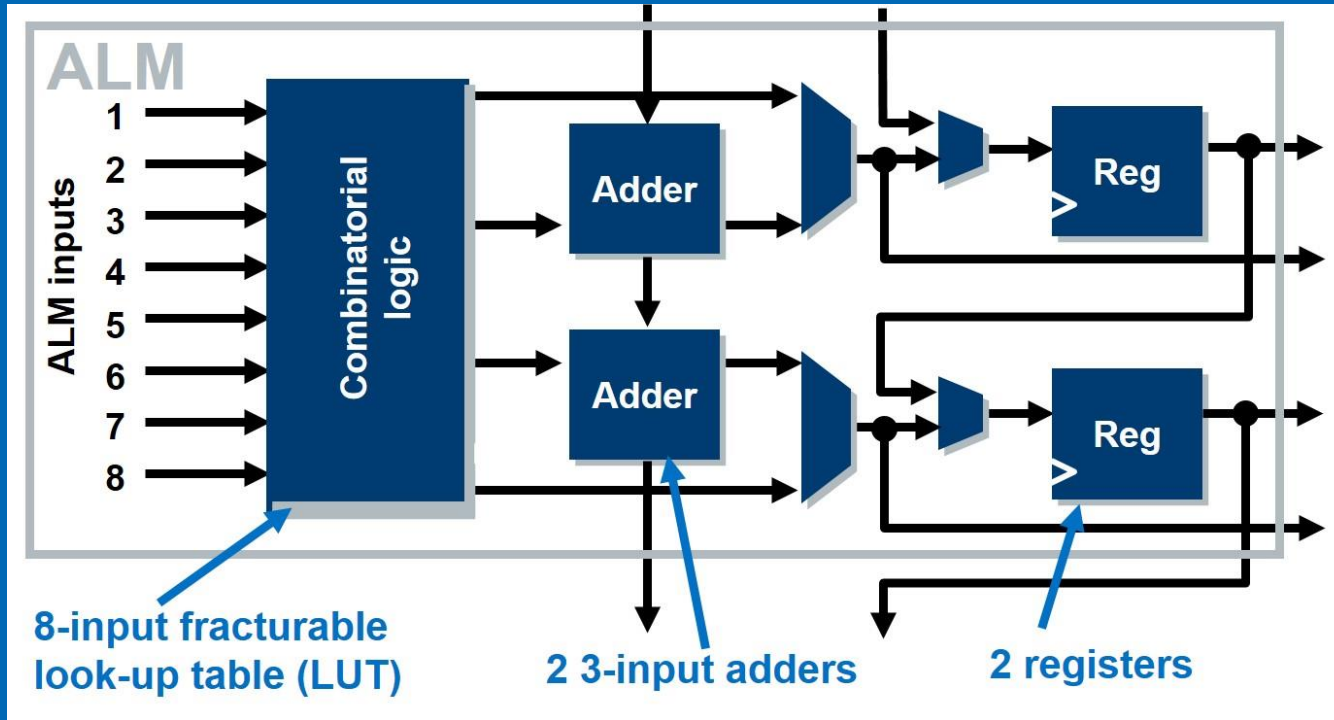

Look-Up Table (LUT): the foundation

$$Y = A'B'CD + AB'CD' + A'BCD' + AB'C'D + A'BC'D + A'BCD$$

```
try {  
  
    sycl::queue q(sycl::default_selector{});  
  
    const float A(aval);  
  
    sycl::buffer<float,1> d_X { h_X.data(), sycl::range<1>(h_X.size()) };  
    sycl::buffer<float,1> d_Y { h_Y.data(), sycl::range<1>(h_Y.size()) };  
    sycl::buffer<float,1> d_Z { h_Z.data(), sycl::range<1>(h_Z.size()) };  
  
    q.submit([&](sycl::handler& h) {  
  
        auto X = d_X.template get_access<sycl::access::mode::read>(h);  
        auto Y = d_Y.template get_access<sycl::access::mode::read>(h);  
        auto Z = d_Z.template get_access<sycl::access::mode::read_write>(h);  
  
        h.parallel_for<class nstream>( sycl::range<1>(length), [=] (sycl::id<1> it) {  
            const int i = it[0];  
            Z[i] += A * X[i] + Y[i];  
        });  
    });  
    q.wait();  
}
```

What is IP (Intellectual Property)

- Complex functions that Intel designs for our customers so they don't have to design it themselves
 - Sometimes IP is free
 - The more complex stuff costs since its expensive to develop and make sure it works
- Examples: Ethernet Controller, PCIe Controller, soft processor, multiplier functions, etc.

Basics of Quartus

- Intel® Quartus® Prime Design Software is a tool for FPGA, SOC and CPLD design
- Includes synthesis, debug, optimization, verification and simulation
- Takes a description of an FPGA (schematic or HDL) and determines how the lookup tables are programmed

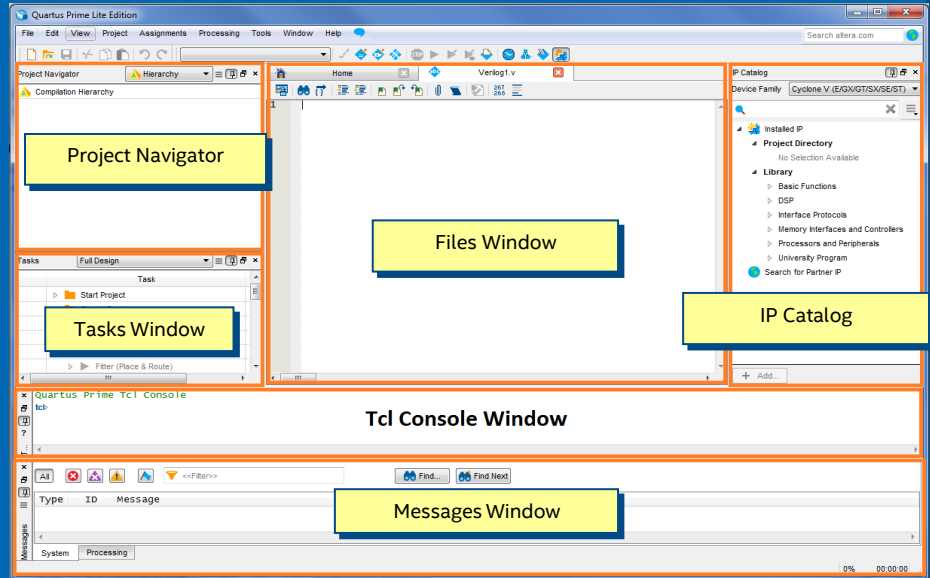

- Many formats to program an FPGA
 - In this class we will use a “.sof” file (SRAM object file)
 - The .sof file is “volatile” and needs to be reprogrammed every time the board is restarted

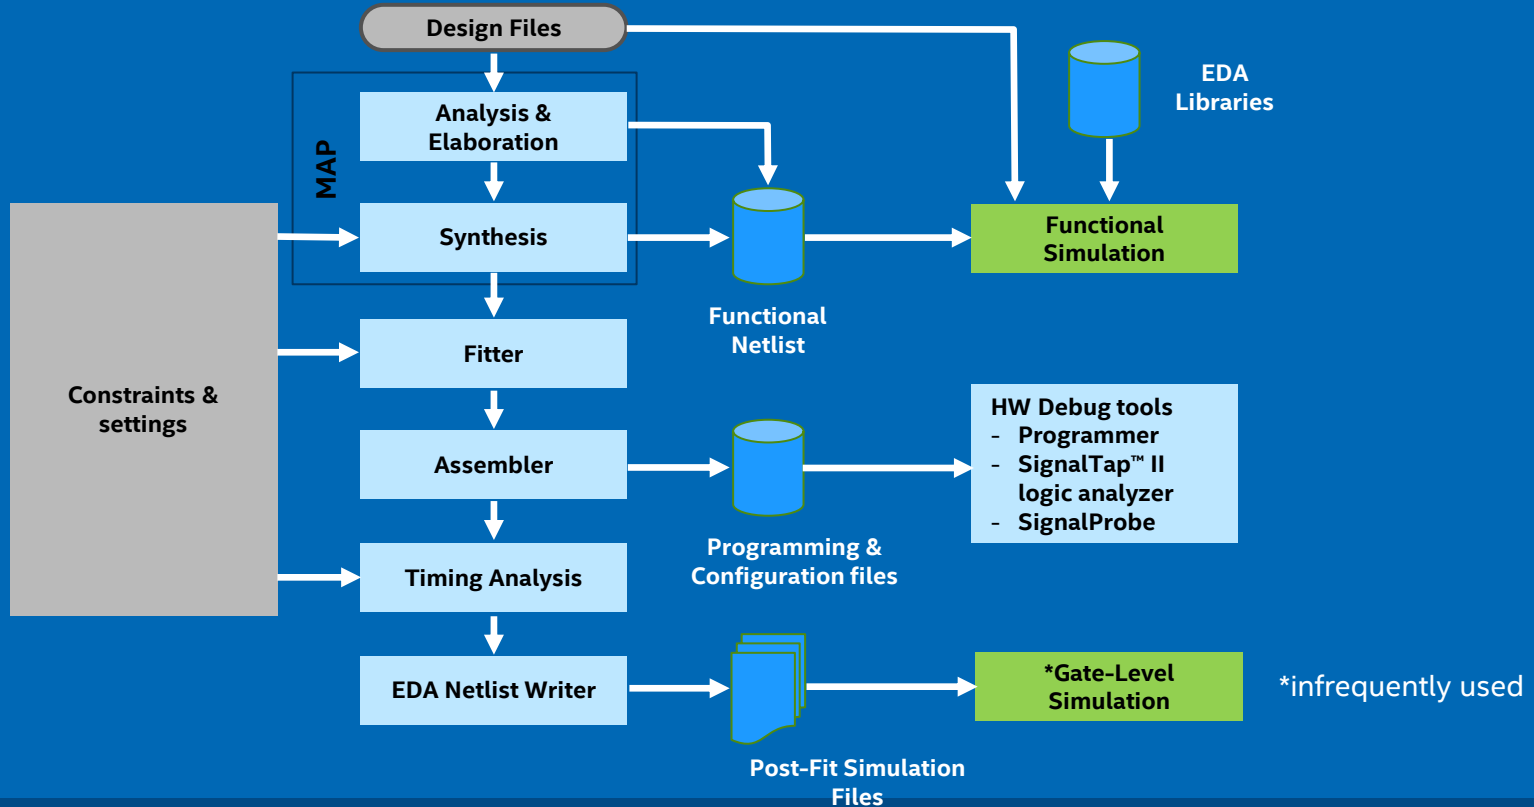

Quartus User Interface

■ Quartus Prime Software Main Window

- **Project Navigator** shows your project hierarchy, source files, design units, IP and design revisions in your project.
- **Tasks** window shows the status of the design and can be used to run or re-run parts of the design flow
- **Messages** window outputs messages from each process of the run.
- **Files** window has tabs for the report browser, open design files and any other file opened by the user.
- **IP Catalog** window is open by default and is used to generate IP functions that are to be used in your design.

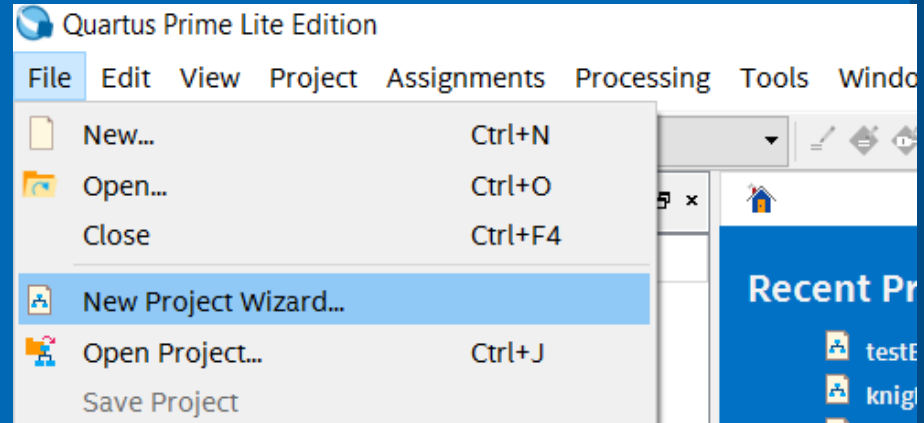

Tools Flow

New Project Wizard

1. Name project
2. Set Working Directory & Top-Level Entity
3. Add source files
4. Select Device
5. EDA tool settings

All settings can be modified later. Some steps can be skipped.

The top level entity must match the top level module in your design exactly (case sensitive) in order to avoid a compile error.

A yellow sticky note with a red pushpin icon at the top left. The text 'Helpful Tips' is written on it in a black, handwritten-style font.

Family & Device Settings

New Project Wizard

Family, Device & Board Settings

Device Board

Select the family and device you want to target for compilation.
You can install additional device support with the Install Devices command on the Tools menu.

To determine the version of the Quartus Prime software in which your target device is supported, refer to the [Device Support List](#) webpage.

Device family

Family: MAX 10 (DA/DF/DC/SA/SC)

Device: All

Target device

☐ Auto device selected by the Fitter

☒ Specific device selected in 'Available devices' list

☐ Other: n/a

Show in 'Available devices' list

Package: Any

Pin count: Any

Core speed grade: Any

Name filter: 10M50DAF484

☒ Show advanced devices

Available devices:

Name	Core Voltage	LEs	Total I/Os	GPIOs	Memory Bits	Embedded multiplier 9-bit cl
10M50DAF484C6GES	1.2V	49760	360	360	1677312	288
10M50DAF484C7G	1.2V	49760	360	360	1677312	288
10M50DAF484C8G	1.2V	49760	360	360	1677312	288
10M50DAF484C8GES	1.2V	49760	360	360	1677312	288

< Back Next > Finish Cancel Help

Expand the window so you can see all the fields

Get the part number for your specific device by looking on the chip on your board or the side of the box.

⚠ 332012 synopsys Design Constraints File file not found: 'Lab1.sdc'.

Helpful
Tips

Warnings shown in blue won't prevent your design from compiling or being programmed, but they could indicate possible bugs. This lab does not have any design constraints, so the .sdc file is not needed. You will learn how to create one in the timing analysis workshop.

Program your FPGA

Test your design

Labsland

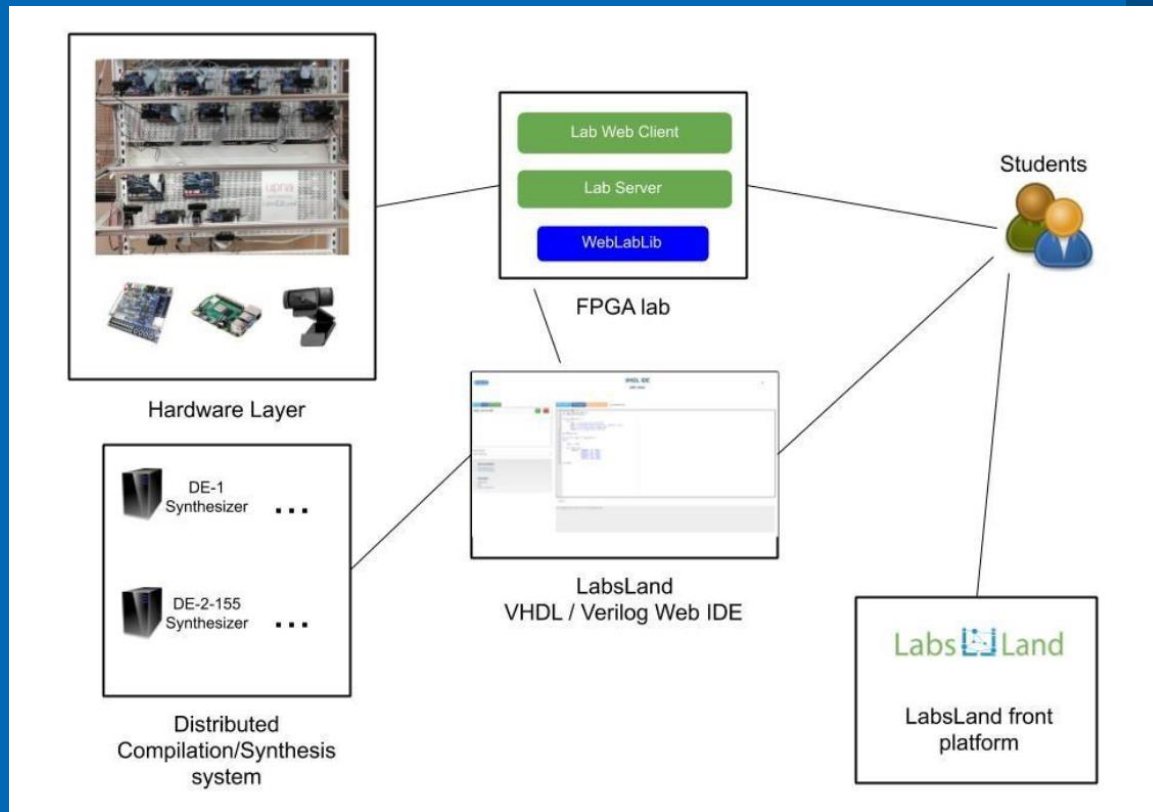

Covid-19: New challenges for remote learners

- In June 2020, we launched initiatives to help remote learners
- Addresses situation where student does not have a physical board in their possession
- Simulation based only requires Modelsim
 - Quick compiles
 - More setup with IP
 - Slower clock speed
- Hardware based requires Intel Quartus Prime-Lite
 - Longer compiles, but hardware accurate
 - Two methods Remote Console and Labsland *we are using Labsland for this lab
 - More complex networking, adds a level of hierarchy in the design

LabsLand

Real laboratories, on the Internet

- LabsLand connects schools and universities with **real laboratories** available somewhere else on the Internet. A real laboratory can be a small Arduino powered robot in Spain, a kinematics setup in Brazil or a radioactivity testing lab in Australia. They are real laboratories, not simulations: the laboratories are physically there, and students from these schools and universities access them.
- Fee based model to access labs (no charge today!)
- Note – there is a special link to register for labsland access, registration from the labsland home page will not work

- Two modes:
- IDE mode is an overlay on Quartus. No software or hardware install required by the user. Compiles are on the cloud. Some limitations on IP usage and debug capabilities
- No-IDE mode requires local software installation and utilizes Labsland remote FPGA hardware installation – this is what you will use in today's lab

First Lab: Switch to LED

assign LED = SW;

Next lab: Multiplexer

Circuit

s	m
0	x
1	y

Truth
table

Symbol

The multiplexer can be described by the following Verilog statement:

```
assign m = (~s & x) | (s & y);
```

Knight Rider

Quartus and Design Tips

- When Quartus Prime Lite first starts for the very first time it might ask you about purchasing a license, select Run Quartus, all licenses are free for this lab.
- If things fail to compile, check your top Level Entity Setting → Setting → Top Level Entity and make sure that the module <design> matches your top level entity, including case.
- Check the LEDR[0] and LEDR[9] pins carefully in the Knight Rider lab and see if they sequence properly. If not, study the code carefully!
- Sometimes copy and paste from files into Quartus has carriage return formatting errors. Open the github URL in the breakout room and you can also download the files directly.

Learning more

- DE10-Lite development kit - \$65 from Terasic with student discount
- <http://fpgauniversity.intel.com> – lots of helpful labs and tutorials
- Customer training site (google Intel FPGA training)
 - In catalog, search on university
- Practice makes perfect!
- Thanks for attending!
